Summary:

Introspection into one's own mental state is a critical ability closely associated with consciousness. One important area of progress over the last decade has been the development of operational measures of metacognitive ability in animals and humans. The talks in this symposium will cover a broad range of recent progresses from metacognition in animals to neural mechanisms in humans. Further, we expect to open a lively, cross-disciplinary discussion on the relevance of metacognition to consciousness.

Organizers: Shintaro Funahashi (Kyoto University, Japan)

Ryota Kanai (University College London)

Contact: Ryota Kanai (kanair@gmail.com)

PROGRAM:

9:00-9:20 "Opening Remark & Introduction"

- *Shintaro Funahashi* (Kyoto University, Japan)

9:20-10:00 "Metacognitive approach to phenomenal and access consciousness"

- *Ryota Kanai* (University College London, UK)

10:00-10:40 "Metacognitive Judgments reflect conscious phenomenology "

- *Hakwan Lau* (Columbia Univ, USA)

---- Break ----

11:00-11:40 "Metamemory in remembering intentions"

- *Satoshi Umeda* (Keio University, Department of Psychology, Japan)

11:40-12:20 "Awareness of performance: what do we know about our choices"

- *Steve Fleming* (*University College London, UK*)

---- Lunch ----

14:00-14:40 "Are birds metacognitive? "

- *Fujita Kazuo* (*Kyoto University, Japan*)

14:40-15:20 "Metacognition and memory systems in primates: Success and limitations."

- *Robert Hampton* (*Emory University, USA*)

---- Break ----

15:20-16:00 "Prefrontal neuronal activity in monkeys performing a metamemory task"

- *Akio Tanaka* (*Kyoto University, Japan*)

16:00-17:00 "Discussion"
